25X1D

[redacted] photography [redacted] reveals new indications of activity at the Perm Rocket Test Facility, located at 58-01N 56-34E, 10.5 nautical miles east of Perm, USSR (Figures 1 and 2). As reported from photography, from [redacted] missions [redacted] the facility contains a large vertical stand for testing liquid propellants and associated facilities, including a checkout building, a control/observation building, a possible laboratory building, a warehouse for rail-to-road transfer, fuel storage tanks, and engineering, shop, storage, and administration buildings. 1/ Changes [redacted] (annotated on Figure 3) are as follows: A possible tower

or building crane has been erected immediately northeast of the unidentified building (item 7) in the south-central part of the facility. An area of earth scarring, extending approximately 500 by 300 feet, appears in the central part of the facility. Two new small structures are observed near the wall approximately 700 feet north of the test stand (item 1). An earth scar extends southeastward from these small structures to a point 200 feet southeast of the control/observation building (item 3). Earth scarring indicating possible construction is observed at a location midway between two storage buildings (items 15 and 17) in the Storage Area.
